

WASTE-LED DECOMMISSIONING APPROACH

One-stop innovative nuclear solutions

**Integrated support in any dismantling
and waste management project**

**Reducing waste volume and recycling
to responsibly shape the future**

Cyclife is EDF Group's subsidiary dedicated to the challenges of the decommissioning market and the growing requirements from its customers to recycle nuclear waste.

Cyclife's mission:

- Develop innovative cost-effective solutions for waste management and decommissioning
- Answer the growing need to reduce volume, recycle waste and preserve disposal capacity
- Use EDF's skills and assets to offer efficient decommissioning and waste management solutions following a waste-led decommissioning approach

DECOMMISSIONING

Physical and radiological inventory of the plant

Cyclife provides a turnkey state-of-the-art physical and radiological inventory of the entire nuclear power plant from calculations to final characterization.

Technical support

Cyclife can provide on-site decommissioning projects, taking benefit from its technical expertise in decontamination of systems, structures and sites (soil and groundwater).

Dismantling

Cyclife can perform a wide range of dismantling services, including cold and hot segmentation (for example of primary circuits or other steam supply systems).

Optimization with digital

DEMplus® for nuclear® is a decision support and simulation tool based on real-time 3D technologies. This application calculates cost, time, waste flows and effective dose uptake by operators during an activity related to operations, maintenance or dismantling in order to effectively select the optimized scenario.

Preliminary studies and decommissioning strategy

Cyclife realizes preliminary studies and decommissioning strategies: decommissioning and waste management scenario, as well as environmental impact assessments.

Program and project management

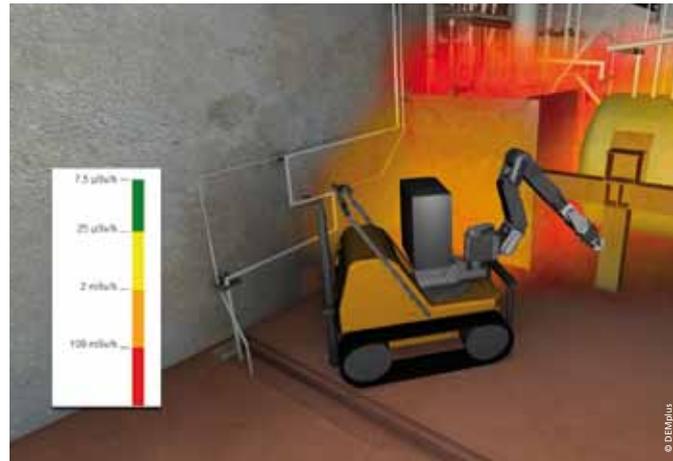

Cyclife offers tools and professional expertise to deliver decommissioning project management solutions and actions to schedule transition period, thanks to the presence of technical experts throughout the entire duration of the project.

Costing

Cyclife assesses, optimizes the risks and contingencies for cost estimates, using technical insights from best international practices and in-house benchmarking.

Professional training

Cyclife's experts provide bespoke training to decommissioning personnel, from on-site operators to program managers.

WASTE MANAGEMENT

FROM CONCEPT
TO FINAL DELIVERY

Waste characterization

Cyclife carries out an accurate physical and radiological waste inventory to optimize waste management by selecting the optimal route for each waste.

Waste routing

Cyclife operates three European waste treatment facilities, each with unique capabilities and existing secondary waste routes. Cyclife ensures that waste is routed to the facility which offers customers the best technical, economical and regulatory solution.

Waste storage and disposal developments

Cyclife designs temporary waste storage facilities and studies with Andra (French national radioactive waste management agency) for the construction of the French deep geological disposal (Cigéo) dedicated to high-level waste.

Waste treatment engineering

Cyclife provides engineering solutions for the design of waste treatment facilities and innovative processes in this field.

WASTE TREATMENT

On-site services

Cyclife has developed an offer to treat waste directly on production sites thanks to mobile processing and conditioning units, and to personnel able to operate on client's sites.

Sorting, segregating, packaging and transport

Cyclife supports its customers for waste management and transport from their nuclear site.

Metallic waste treatment, melting and recycling

Cyclife processes metallic waste and operates blasting of metallic waste, size-reduction, melting operations and clearance.

Large components

Cyclife owns unique capabilities and expertise for the management of large components that saves final disposal costs for customers. Cyclife's offer integrates chemical and abrasive decontamination.

Incineration

Cyclife incinerates combustible, solid and liquid waste. Cyclife also treats low radioactive waste arising from hospitals and laboratories.

Pyrolysis

Apart from traditional incineration, Cyclife also uses pyrolysis, in which material is treated by dry distillation without any oxygen.

ONE-STOP
INNOVATIVE SOLUTIONS

EUROPEAN FOOTPRINT

Cyclife is a subsidiary of EDF Group owned by 100%. Created in July 2016, Cyclife provides to its clients with an offer that integrates decommissioning and waste management services.

UK | Workington Facility

- > Size-reduction and shot blasting: 3,000 T/year
- > Consultancy and Decommissioning support

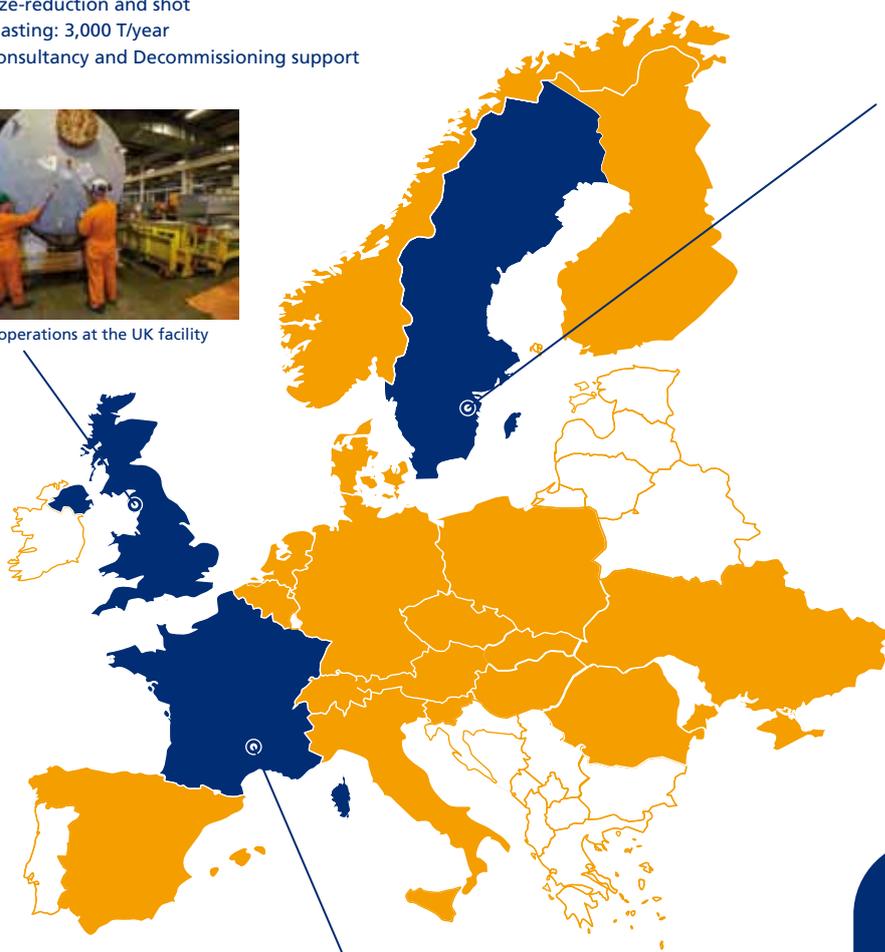

Recycling operations at the UK facility

SWEDEN | Nyköping Facility

- > Melting: 5,000 T/year
- > Incineration: 500 T/year
- > Pyrolysis: 50 T/year
- > Large components workshop: 2,000 T/year
- > Decontamination and segmentation of components up to 400 T
- > Clearance: 2,500 T/year

Melting operations at the Swedish facility

-  Our locations
-  Our experiences

FRANCE | CENTRACO Facility On Sites: Mobile Units

- > Melting: 3,500 T/year
- > Incineration: 6,000 T/year
- > Large components workshop: decontamination and segmentation of components up to 200 T

Smelting operation at CENTRACO facility

EUROPE

- > Engineers specialized in decommissioning, dismantling, waste management, safety and environmental studies including engineering and digital solutions.
